BLYNK VIRTUAL TECHNOLOGIES PVT. LTD.

KNOW YOUR CUSTOMER (KYC)
STANDARD OPERATING PROCEDURE

MCA-Registered | RBI & PMLA Compliant | P2P Virtual Asset Service Provider
Established July 2024 | Version 1.0 | Confidential — Internal Use Only

Document Type	KYC Standard Operating Procedure (SOP)
Applies To	RM Team, KYC Team, Binance Operators, Management
Platforms	Binance (sell USDT only) | Bitget | KuCoin | CoinEx (buy all coins)
Regulatory Basis	RBI Master Directions on KYC | PMLA 2002 | AML / CDD / EDD Framework

01 PURPOSE & BACKGROUND

KYC (Know Your Customer) is a mandatory regulatory process used by Blynk Virtual Technologies Pvt. Ltd. to verify every customer's identity before processing any P2P cryptocurrency transaction. Core objectives:

- Verify that customers are genuine and their identities are confirmed.
- Prevent fraud, money laundering, and terrorist financing.
- Comply with RBI Master Directions on KYC, PMLA 2002, and AML regulations.
- Protect the company, employees, and the broader financial system.
- Maintain secure, auditable records in Google Drive per regulatory requirements.

Blynk Virtual Technologies is a government-recognized and MCA-registered entity. All KYC processes are designed to meet and exceed compliance requirements set by the Reserve Bank of India (RBI) and the Government of India.

CONFIDENTIALITY NOTICE: This document contains confidential company information. Unauthorised sharing or misuse may result in disciplinary action.

02 AML / CDD / EDD FRAMEWORK

2.1 Anti-Money Laundering (AML)

A regulatory framework to prevent criminals from disguising illegally obtained money as legitimate income. AML laws require Blynk Virtual to monitor all transactions, report suspicious activity, and verify customer identities at every stage.

2.2 Customer Due Diligence (CDD)

Standard level of KYC applied to ALL customers at onboarding. Involves collecting and verifying customer information — identity, address, and source of funds — to assess risk level.

2.3 Enhanced Due Diligence (EDD)

A deeper level of scrutiny applied exclusively to HIGH-RISK clients. Involves additional checks: source of wealth, transaction monitoring, screensharing of portfolios or trade history, and ongoing periodic reviews.

2.4 Regulatory Basis

- RBI Master Directions on KYC: Customers verified via Simplified, Standard, or Enhanced procedures depending on risk. Video KYC is recognised as equivalent to face-to-face verification.
- PMLA 2002: All financial institutions must collect and verify KYC to prevent money laundering and terrorist financing.
- Customer Acceptance Policy: Transactions must not proceed without proper, completed KYC.
- Data Privacy & Security: KYC data must be stored securely with strict confidentiality and integrity measures.

03 MULTI-LEVEL KYC CLASSIFICATION

Classifying a client into only three risk buckets is insufficient for thorough identity verification and fraud prevention. Blynk Virtual Technologies uses a multi-level KYC system that considers a combination of Binance ID age, trade history, Aadhaar quality, customer profile, source of funds, and state of residence — together. No single metric is a definitive pass or fail; all signals must be read together before arriving at a KYC level and payment method decision.

IMPORTANT: Binance ID age is not a definitive proof of identity or intent. It is one signal among many that indicates how long a person has been active in the P2P market. Many genuine new investors or traders are simply new to the platform — they may be legitimate buyers who do not yet understand how P2P works and sell to whoever gives the best price, which can unknowingly expose them to fraud fund contamination. Age of ID must always be read alongside trade volume, feedback, Aadhaar quality, SOF, and counterparty behaviour.

KYC LEVEL	ID AGE	PROFILE SIGNALS	AADHAAR QUALITY	VERIFICATION REQUIRED
TIER 1 PREMIUM	1,500+ days (~4+ years)	300–400+ total trades. Balanced buy/sell ratio. 100% positive feedback. Wide counterparty base. Age of customer 30+ years.	Complete address with house number. From low-risk states: Kerala, Tamil Nadu, Karnataka, Delhi, Maharashtra.	Name + Aadhaar + Face VKYC + POS or direct IMPS (Management approval).
TIER 2 ESTABLISHED	730–1,499 days (~2–4 years)	Decent trade volume. Reasonably balanced buy/sell. Mostly positive feedback. SOF is clear and verifiable. HNI clients may have fewer trades — acceptable.	Decent Aadhaar with full address. Low-risk or neutral state. Any concerns to be flagged.	Name + Aadhaar + Face VKYC + Standard payment via POS.
TIER 3 STANDARD	365–729 days (~1–2 years)	Moderate trade count. No major red flags in feedback. SOF needs verification. Completion rate checked. Investor or trader profile assessed.	Aadhaar with reasonably complete address. State risk noted and factored in.	Name + Aadhaar + PAN + Face VKYC + SOF + Platform knowledge check. POS mandatory.
TIER 4 CAUTIOUS	90–364 days (3–12 months)	Low trade history. New to P2P — may be a genuine new investor or trader who does not yet understand the market. Verify intent carefully. Background check mandatory.	Aadhaar must be fully complete. State risk assessed. From a High Monitoring Zone — treat as elevated risk automatically.	Full docs + EDD + SOF proof + bank statement + counterparty investigation + platform knowledge + Aadhaar. POS only. Management approval required.

TIER 5 HIGH RISK	Under 90 days	Very new to P2P. Very few or no trades. SOF unclear. Any negative feedback. From a High Monitoring Zone. Women or elderly clients where consent of account usage must be verified on call.	Incomplete Aadhaar, or from Rajasthan, Haryana, Jharkhand, Odisha, or other high-risk states. Aadhaar alone not sufficient.	Full EDD. Verbal consent on call confirming the account holder is operating the ID themselves. Management approval mandatory before any trade. POS only. Consider rejection.

SPECIAL CONSIDERATION	RULE
HNI (High Net-Worth Individuals)	HNIs are generally good IDs. They typically place clean orders, share Aadhaar, and do a basic video face verification. Do not over-KYC HNIs — basic VKYC and face chat is usually sufficient. Read the profile and apply judgment.
Women or Elderly Account Holders	Women and elderly customers may not be aware their account is being used on a P2P platform by another person. A verbal consent must be taken on the call: confirm the person is using the account themselves and not someone else.
Genuinely New Investors / Traders	Many new P2P users are genuine investors new to crypto. They sell USDT to whoever offers the best price without understanding the risk of fraud fund contamination. This makes ID age a signal, not a verdict. Apply Tier 4 or 5 KYC — educate the client, do not penalize.
Avoidance States (Higher Scrutiny)	Rajasthan, West Bengal, Jharkhand, Odisha IDs require additional scrutiny — not automatic rejection. All signals must be read together. Avoidance of an ID is not a definitive metric on its own.
Low-Risk States (Positive Signal)	Kerala, Tamil Nadu, Karnataka, Delhi, Maharashtra Aadhaar cards are generally considered a positive signal when combined with good ID age and SOF. Still apply the appropriate KYC tier based on full profile.

HIGH MONITORING ZONES (elevated scrutiny — not automatic rejection): Rajasthan | Bihar | Chhattisgarh | West Bengal | Jammu & Kashmir | Odisha | Jharkhand

04 KYC DOCUMENTS REQUIRED

Aadhaar Card	Front & Back. Must show: Complete Name, Full Address (city, state, pincode).
PAN Card	Front copy. **Mandatory only for purchase orders** — without PAN, TDS is deducted at 20% instead of 1%.
Face Verification	Conducted via Video KYC (VKYC). RBI-recognised as equivalent to face-to-face verification.
Source of Wealth (SOW)	Salary slip (if employed) or GST No. (if business owner).
Source of Funds (SOF)	Latest till date bank statement, last credit transaction identification
Bank Statement	Last 30 days in PDF format ONLY. Screenshots and forwarded PDFs are REJECTED.
Trade / Portfolio Proof	P&L screenshot or portfolio shown on screensharing (for trading or investment clients).
USDT Purchase Proof	Check the flow of recent purchased crypto usage
EDD — Additional Docs	USDT purchase proof | Bank statement verified on banking app | Background check | Relationship proof for 3rd-party payments.

05 NEW CLIENT — BINANCE OPERATOR SCRIPT & WORKFLOW

When a new client places an order on Binance P2P, the Operator handles the first interaction and collects required documents before passing to the RM / KYC Team.

1	Greet and request documents: 'May I request you to share your Aadhaar (front and back).'
2	Ask purpose: 'May I know your purpose of buying USDT?'
3	Ask source: 'May I know your source of funds?'
4a	**IF SALARIED: 'Could you please provide your last month's salary slip, salary credit message, company id card, or any related document ?'**
4b	**IF BUSINESS OWNER: 'What type of business are you running? Could you share your GST number, registration or any other related proof for verification?'**
5	Inform RM contact: 'Our RM team will contect you for a quick 5-minute communication and face verification.We kindly request your cooperation so we can proceed smoothly.' (Use 'contect' — Binance filters contact-sharing language.)
6	Forward ALL received documents immediately to the RM Team and KYC Team via WhatsApp KYC Group.
7	If client is frustrated by wait: 'I understand — please allow us a minute, our team will reach out to you shortly.'

CRITICAL: Do NOT share IMPS/bank details without RM Team and Management approval. Do NOT release coins before payment is confirmed in the bank — screenshots are NOT valid proof of payment.

06 RETURNING / OLD CLIENT — ORDER WORKFLOW

For clients with an existing verified profile and trade history with Blynk:

1	Confirm bank: 'Kindly let me know from which bank account you will be making the payment.'
2.1	If same as already used bank - Share UPI: 'Kindly pay on UPI .....'
2.2	If using different account which has never been used before –Ask them the reason for switching of Bank Accounts – They May Answer Like Limit Over / Server Issue / Causally Using . You may request politely once again that as per company policy could you Please use your previous bank account .
2.2.1	If Client Rejected , Risky Client – EDD Triggers , follow EDD Guideline as per section 11
2.2.2	If Client Rejected , Safe Client – Mark for Yellow Flag , Proceed to take payment in POS Method .
2.2.2.1	If Client Rejected , Safe Client – Mark for Yellow Flag Asks for IMPS Payment Method , EDD Triggers , follow EDD Guideline as per section 11

3	Close: 'Thank you for trading with us. We wish you a profitable day and look forward to trading with you again.'

If the returning client has completed 10 or more transactions with Blynk, begin the POS-to-IMPS upgrade process (see Section 9).

07 VIDEO KYC (VKYC) SCRIPT — RM & KYC TEAM

The following script is used during the Video KYC call. Questions may be adapted based on client profile and situation.

1	Introduce: 'Hello, this is [Name] from Blynk Virtual Technologies Pvt. Ltd.'
2	Confirm order: 'You placed an order on Binance?'
3	Get name: 'Can I know your complete name as per your Aadhaar card?'
4	Get address: 'What is your complete address as per your Aadhaar card?' (Check If Counterparty Remembers his Address , / is Confident and is not Referring to any document / or reading it .)
5	Acknowledge: 'Thank you for sharing your details.'
6	Ask purpose: 'May I know the purpose of purchasing USDT?'
7	Ask Source of Funds , “ Sir May I Know Your Source of Funds ? , “
7.1	For Working Individuals / Job – “ Sir May I know where are you working , Do you have your Corporate Id or any documents as proof ? “
7.2	For Business / Self Employed – “ Sir could you please share your Registration or any documentation related to your work ? “
7a	**IF TRADING: 'Can you please share your screen and show me your last trading history and P&L?'**
7a.1	**IF TRADING: 'Can you please share your screen and show me your last trading history and P&L?' , If denies , ask them could you please share real time screenshot with this call visible on display .**
7b	**IF INVESTMENT: 'Can you please show me your investment portfolio on screensharing?'**
7b.1	**IF INVESTMENT: 'Can you please share your screen and show me your last trading history and P&L?' , If denies , ask them could you please share real time screenshot with this call visible on display .**
8	Request bank statement: 'For verification, could you please share your last 30-day bank statement in PDF format and forward it to the KYC WhatsApp group for management review and approval.'

If a client becomes frustrated with the process: 'This is a one-time verification conducted by Blynk Virtual Technologies. It is required by the Reserve Bank of India (RBI) and Government of India, as Blynk is a registered trading company. These regulations ensure compliance, security, and protection for both you and the company.'
Operator should always keep in mind that there are

After VKYC completion — mandatory actions:

- Store VKYC recording securely (company KYC folder — restricted access).
- Update the KYC WhatsApp group immediately with outcome.
- Notify RM Team and escalate bank statement to Management for review and payment method approval.

08 PAYMENT METHODS & FUND RISK LEVELS

Blynk Virtual Technologies operates exclusively on CLEAR FUNDS — money that has fully completed the bank clearing process and is available for use (not pending, not on hold, not subject to reversal).

CHANNEL	USAGE & RISK LEVEL	COMPLIANCE RULES
POS (New Clients)	For new clients after initial KYC. suspicious fund probability. Covers: UPI payments, family/friend transfers, first-time traders.	Mandatory until banking activity is understood and management approves upgrade. Safer initial method.
IMPS Bank	IMPS/NEFT from verified clients with private salary or moderate-risk profile	Requires 30-day bank statement (PDF only) and Management approval before account details are shared.
PAYOUT Bank	Cleanest verified funds only: CDM bank transfers, cleared cheques, Govt. salary, loan disbursements, mutual fund redemptions, FDs, bonds.	Fully RBI-compliant. Reserved strictly for lien-free, verified, clear funds .

8.1 POS Scenarios — When to Use POS

SCENARIO	PROFILE	DECISION
Scenario 1	Good Aadhaar + Good Binance ID + No/poor bank statement + Good VKYC	POS
Scenario 2	Good Aadhaar + Poor Binance ID + No/poor bank statement + Good VKYC	POS
Scenario 3	Incomplete Aadhaar + Poor Binance ID + Clear bank statement + Additional proof verified	POS
UPI Transfer	Multiple UPI transfers from different persons	POS
Family/Friend Pay	Payment from account not matching account holder	POS + KYC of payer required.

8.2 Third-Party Payment Conditions

Third-party payments = money from someone other than the Binance account holder. High-risk — can trigger fraud alerts, reversals, or account freezes.

Immediate Family / Spouse	Obtain Level 2 KYC. Collect bank statement from payer. Verify before proceeding.

Friend / GF / BF (non-family)	Obtain Level 3 KYC from BOTH parties (sender + Binance account holder). Proceed with POS ONLY if all checks pass.

8.3 TDS Deduction Rules — Binance Only

TDS applies on Binance orders only. KuCoin: no manual deduction required — pay as order amount.

PAN Card Provided	TDS deducted at 1% of order amount.
PAN Card NOT Provided	TDS deducted at 20% of order amount.
Example — Order ₹20,000 (with PAN)	You Pay: ₹20,000 | TDS: ₹200 | Payable to client: ₹19,800

09 POS TO IMPS UPGRADE PROCESS

For loyal clients with a strong, consistent trading history, Blynk moves them from POS to IMPS to increase use of clear funds and reduce operational risk.

Eligibility Criteria:

- Client has completed 10 or more successful transactions with Blynk.
- Banking activity is well-understood, consistent, and with no red flags.

Upgrade Steps:

1	Request client's latest 30-day bank statement in PDF format only.
2	Immediately reject screenshots, photos, or forwarded PDFs — these are NOT acceptable under any circumstances.
3	Share the original PDF in the designated KYC WhatsApp group for Management review.
4	KYC Team verifies: account number, IFSC, branch, customer name, lien entries, UPI source patterns, clear/available balance.
5	If KYC Team confirms funds are clean, lien-free, and compliant: share IMPS/NEFT account details with client.
6	If funds are unclear, have lien markings, or Management does not approve: do NOT share IMPS details. Continue with POS.

IMP: IMPS details must NEVER be shared with any client who has skipped the bank statement verification step, regardless of their trade history or request.

9.1 Bank Statement Verification Checklist

Account Details	Verify: account number, account age, IFSC code, branch name, and customer name match.
Lien Check	Search for: 'Lien Marked', 'Funds Under Lien', 'Hold', or 'Blocked Balance'. Frequent lien entries = compliance risk flag.
UPI Source Patterns	If multiple UPI transfers from different persons: contact client for explanation. Request additional statements from those sources if required.

Clear Balance	Only 'Available Balance' or 'Clear Balance' is usable. Shadow balance from cheques or pending transfers is NOT valid.
Final Gate	ONLY after Management confirms funds are safe — Operations Team may share IMPS/NEFT details. No exceptions.

10 PLATFORM & ACCOUNT ROUTING RULES

Blynk Account Funds	Use on Binance and KuCoin.
Non-Blynk Account Funds	Use on Bitget and CoinEx.
CoinEx orders	Add client to Shubham Sir's account or Blynk account.
KuCoin orders	Add client to Shubham Sir's account or Blynk account.
Binance (SS) orders	Use Shubham Sir's account only.
Bitget orders	Use Blynk account or as per senior instructions.
Binance (Blynk) orders	Use Blynk accounts only.
UPI method	Use on Bitget/CoinEx Non-Blynk accounts only when UPI limit applies. Otherwise use IMPS method for ads.
We SELL on	Binance ONLY — USDT only.
We BUY on	Binance, Bitget, KuCoin, CoinEx — all coin types.

11 RE-KYC / VKYC REPORT — FILLABLE FORMAT

Complete this form for every ReKYC review. Store a copy in Google Drive KYC folder immediately upon completion.

11.1 Basic Customer Details

Customer Full Name	(As per Aadhaar Card)
Mobile Number	
Date of First KYC	
Date of ReKYC	
Binance User ID	
State / Risk Zone	[ ] High Monitoring Zone [ ] Regular Zone

11.2 Risk Classification & Documents

Risk Level	[ ] Low Risk [ ] Medium Risk [ ] High Risk
Binance ID Age	
Face Verification (VKYC)	[ ] Completed [ ] Pending
Background Check	[ ] Done [ ] N/A (Low Risk)

11.3 Source of Funds & Bank Statement

Occupation Type	[ ] Govt. Job [ ] Private Job [ ] Business [ ] Other
Salary Slip / GST No.	[ ] Submitted [ ] N/A
Bank Statement Period	Last 30 Days – PDF Only
Statement Format Received	[ ] Original PDF (Accepted) [ ] Screenshot (REJECTED) [ ] Forwarded PDF (REJECTED)
Lien Entries Found	[ ] None [ ] Yes – Count:
Multiple UPI Sources	[ ] No [ ] Yes – Clarified with client
Funds Verified as Clean	[ ] Yes – Management Approved [ ] No – Pending [ ] Rejected

11.4 Payment Method

Payment Method Assigned	[ ] POS [ ] IMPS [ ] IMPS – Payout
Fund Risk Level	[ ] Low [ ] Moderate [ ] High/Suspicious
Third-Party Payment?	[ ] No [ ] Yes – Relation:
3rd Party KYC Level	[ ] Level 2 (Family/Spouse) [ ] Level 3 (Friend/GF/BF) [ ] N/A
IMPS Upgrade Eligible	[ ] Yes (10x+ trades, approved) [ ] No

11.5 Trading & USDT History

Total Trades Till Date	
First Payment Amount (INR)	
Total Volume Till Now (INR)	
USDT Current Status	[ ] Actively Trading [ ] Invested [ ] Held in Wallet
Trading Purpose Confirmed	[ ] Trading – P&L shown on screenshare [ ] Investment – Portfolio shown

11.6 VKYC Conduct Record

VKYC Conducted By	
Date & Time of VKYC	
Platform Knowledge Verified	[ ] Yes – Binance screenshare [ ] No
Client Cooperative	[ ] Yes [ ] No – Notes:
VKYC Stored in Google Drive	[ ] Yes [ ] No
KYC WhatsApp Group Updated	[ ] Yes [ ] No

11.7 Management Sign-Off

Reviewed By (RM / KYC Team)	

ReKYC Outcome	[ ] Approved [ ] Rejected [ ] Additional Docs Required
IMPS Upgrade Approved	[ ] Yes [ ] No [ ] N/A
Rejection Reason (if any)	
Next Review Date	
Management Signature	

12 STANDARD Q&A — CLIENT HANDLING RESPONSES

Standardised responses for the RM Team and KYC Team. Adapt tone as needed while keeping the substance consistent.

CLIENT QUESTION	STANDARD RESPONSE
Do you deal face-to-face or in cash?	Sorry sir, as a government-registered VASP we do not deal in cash. You may visit our office for face-to-face transactions using bank payment only.
Can I get discounted rates?	Yes sir, we can provide discounted rates. Let me check with my senior based on your profile and transaction history.
Why is my KYC cancelled?	Our compliance team detected unusual patterns linked to your profile. If you believe this is a mistake, please speak to my senior — they will re-check your case and you may provide additional clarification.
Do you support credit/debit cards or Amex?	Yes sir, we support all major cards. However, additional charges apply per RBI Merchant Discount Rate — we work on low margins and cannot absorb those charges.
Do you provide custom rates or bulk deals?	Yes sir, all depending on your KYC, transaction history, and senior approval.
Do you provide crypto on credit?	Sorry sir, we do not have authority for credit-based transactions.
Why is my payment taking long?	Payments pass through multiple departments and verification checks. We are doing our best and I sincerely apologise for the inconvenience.
Can I pay through a relative's account?	Yes sir, but only after complete KYC, video consent, and ID proof of the person confirming the relationship.
Can you guarantee lien-free funds?	Sir, we cannot provide guarantees, but all funds are legal and received after strict KYC. If any lien ever arises, we provide full assistance and legal support.
Can you send stock before payment?	Sorry sir, I cannot release stock before payment. We are MCA-registered. You may trade in small packets or use a P2P platform escrow service.
Which platforms do you support?	We support all major P2P platforms in India: Binance, Bitget, KuCoin, and CoinEx.
Can I use multiple bank accounts for split payment?	Yes sir, we support multiple accounts and split payments as per your convenience.
Why no cash deposits at counter?	Cash deposits are not allowed under our AML compliance rules. We only accept bank transfers from verified accounts.

Why is coin release delayed?	Coin release is done only after confirming payment in our bank system. Please allow a moment for verification.
Are my transactions safe?	Yes sir, all transactions are fully compliant. We follow strict AML/KYC rules and maintain complete transparency.
Are you a registered company?	Yes sir, we are MCA-registered and a government-recognised organization .
Can you release before payment screenshot?	No sir, payment must first reflect in our bank. Screenshots cannot be considered confirmed payment.
Why do rates change frequently?	Rates depend on live market price, liquidity, and volatility — they update automatically with market movements.
Do you charge hidden fees?	No sir, there are no hidden fees. All charges are shared transparently before the trade.
Can you guarantee profit or returns?	No sir, we do not provide investment guarantees or financial advice of any kind.
I want 500k+ but you're limiting my amount.	Sorry sir, due to high demand our firm operates on a queue-based system. I can give you a clear timeline for processing the remaining amount.
Can I get your personal contact number?	Sorry sir, I am not authorised to share personal information. All communication must go through official channels.
Do you support corporate/business accounts?	Yes sir, we support corporate accounts after enhanced KYC and full document verification.
Can you trade at my custom price?	We operate on live market conditions and liquidity. If feasible, I will check with my senior.
Why do you ask for video consent?	For security, fraud prevention, and compliance with AML and RBI guidelines.

13 KYC DATA STORAGE & SECURITY

Primary Storage	Google Drive — company account, restricted access only
Documents Stored	VKYC recordings, Aadhaar, PAN, bank statements, trade history, SOF documents
Access Control	Authorised RM Team, KYC Team, and Senior Management only
Retention Policy	As per RBI KYC regulations and PMLA 2002 recordkeeping requirements
WhatsApp KYC Group	Used for real-time sharing of bank statements with Management for approval — NOT permanent storage
Confidentiality	Unauthorised sharing of KYC data is a serious breach — subject to disciplinary and legal consequences

14 BINANCE PROFILE ASSESSMENT & FRAUD DETECTION

Every Binance ID tells a story. Before any trade is approved, the RM Team and Operators must read that story carefully. A strong KYC document alone is not sufficient — the Binance profile must be assessed independently to detect red flags that documents cannot reveal.

Bank freezes and lien credits happen when fraud money reaches our bank account. There are exactly two ways this can occur:

1	**FRAUDSTER / MULE ACCOUNT HOLDER** The person is using Binance P2P specifically to launder fraud funds via USDT. They buy USDT with fraud INR, then sell or transfer USDT elsewhere — effectively cleaning dirty money through the P2P system.
2	**GENUINE BUYER/SELLER — CONTAMINATED BY FRAUD P2P TRADER** The client is a legitimate trader but has been selling USDT to a fraudulent P2P investor. That fraud party's tainted INR then reaches our bank account indirectly. The client is unknowingly a link in the fraud chain.

KEY PRINCIPLE: Both scenarios are dangerous for Blynk Virtual. The RM must investigate the profile deeply — not just verify identity, but also understand WHO the client is selling to and WHERE their USDT comes from.

14.1 Binance Profile Metrics — How to Read Them

Use the table below as a reference for every new client profile review. Every metric is rated GREEN (proceed with confidence), AMBER (proceed with caution and deeper questioning), or RED (flag for management / consider rejection). No single metric is a definitive verdict — all signals must be read together as a combined picture.

METRIC	SIGNAL	INTERPRETATION / ACTION
Account Age (Registered / First Trade)	**GREEN (1 year+)**	The person has meaningful experience in the P2P market. An older account is a positive signal — it reduces the likelihood of the account being freshly created for a fraudulent purpose. Above 1 year is generally considered a safe baseline for normal KYC. Above 4+ years with strong trade history indicates a seasoned, established participant.
Account Age	**AMBER (3–12 months)**	The person is relatively new to P2P. This does not mean they are fraudulent — many genuine investors and traders are simply new to the platform. They may not fully understand how the market works and could unknowingly be selling USDT to a fraudulent counterparty who offers the best price. Apply Tier 4 KYC. Educate the client. Ask who they typically sell to.
Account Age	**RED (Under 90 days)**	Very new to P2P. Treat as high risk by default. Apply Tier 5 KYC and seek Management approval before proceeding. Do not approve IMPS. A newly created account may indicate a mule or fraud-linked setup, though it could also be a genuine first-time user — all other signals must be checked carefully.
All Trades (Total)	**GREEN (High volume, consistent)**	A substantial total trade count over time signals genuine, sustained activity in the P2P market. A high count with a balanced buy/sell ratio and positive feedback is a strong indicator of a legitimate participant.
All Trades (Total)	**AMBER (Moderate volume)**	The person has some history but not enough to draw strong conclusions. Proceed with standard or cautious KYC. Verify purpose and source of funds carefully. Ask about typical counterparties.

All Trades (Total)	**RED (Very few trades)**	Very limited history — insufficient to establish a pattern of genuine activity. Could be a new legitimate user or a mule account. Mandatory EDD. Do not approve IMPS until history is better established.
BUY vs SELL Ratio	**GREEN (Balanced ~50:50)**	A balanced ratio of buying and selling suggests genuine two-way market participation. This is the profile of an active trader or investor who participates naturally in the P2P ecosystem.
BUY vs SELL Ratio	**AMBER (Heavy sell bias)**	The person is selling significantly more USDT than they are buying. This warrants investigation: where is the USDT coming from? If they are receiving USDT from unknown counterparties and converting to INR repeatedly, they could be a link in a fraud chain — even unknowingly.
BUY vs SELL Ratio	**RED (Buy only — no sell history)**	A pattern of continuously buying USDT with no sell activity can indicate someone using the platform purely to convert and move funds — a classic characteristic of a mule or laundering operation. Flag immediately and escalate.
30-Day Trade Count	**GREEN (3–15 trades)**	A normal, healthy activity level. Investors typically buy 3–5 times per month. Active traders may go up to 10–15 times per month. This range is consistent with genuine, non-suspicious market participation.
30-Day Trade Count	**AMBER (16–30 trades)**	Above the typical range for a private investor. This level of frequency requires investigation — is the person a professional P2P merchant, or is the volume unusual for their stated purpose? Ask the client directly.
30-Day Trade Count	**RED (30+ trades/month)**	Trading almost every day is extremely high for a private individual. Unless the person is a registered P2P merchant, this level of frequency is a red flag. Apply EDD and seek Management review before proceeding.
30-Day Completion Rate	**GREEN (90%+)**	Consistently completes trades — reliable and trustworthy market participant behaviour.
30-Day Completion Rate	**AMBER (75–89%)**	Some cancellations. Could be innocuous or could indicate price shopping, payment hesitancy, or unstable banking activity. Monitor alongside other signals.
30-Day Completion Rate	**RED (Below 75%)**	A high cancellation rate raises questions about intent. Could signal fund availability issues, reversal attempts, or platform probing behaviour. Escalate to Management.
Avg. Release Time (sell side)	**GREEN (Zero or very low — no recent sell activity)**	The person has not recently sold USDT on P2P. This is a positive signal because bank freeze and lien situations most commonly arise when fraud money is credited from a sell-side counterparty. No recent sells = reduced recent exposure to contaminated funds.
Avg. Release Time (sell side)	**AMBER (Short, consistent)**	Active seller but releases quickly and consistently. Normal behaviour for an experienced trader. Acceptable when combined with other positive signals.
Avg. Release Time (sell side)	**RED (Irregular, delayed, or very long)**	Irregular or very delayed release patterns may indicate active disputes, banking complications, or reversal activity. Investigate the cause before proceeding.

Avg. Pay Time (buy side)	**GREEN (Under 10 minutes)**	Pays promptly and consistently. This is the behaviour of someone who has their funds ready and organised — a positive signal of genuine intent.
Avg. Pay Time (buy side)	**RED (Consistently very slow)**	Slow payment could indicate the person is waiting for funds to arrive from another source before paying — a potential sign of third-party fund coordination or instability in their financial position.
Trading Counterparties	**GREEN (Wide and diverse)**	Trading with a wide variety of counterparties is natural in an active P2P market. It indicates the person is participating broadly and not in a coordinated arrangement with specific parties.
Trading Counterparties	**RED (Very few, repetitive)**	Repeatedly trading with the same small group of counterparties is unusual in a genuine open P2P market. It could indicate a coordinated arrangement — possibly a fraud ring operating together. Flag for investigation.
Positive Feedback %	**GREEN (95–100%, no negative keywords)**	High positive feedback confirms that the person's counterparties have had safe, professional experiences with them. A consistent record of positive reviews across many trades is a strong trust signal.
Positive Feedback %	**RED (Any mention of scam/fraud/fake)**	If any review — regardless of overall percentage — contains words such as 'scam', 'fraud', 'fake', 'cheated', or similar: REJECT immediately. This is a non-negotiable rule. Do not proceed under any circumstances.
Trade Type	**GREEN (Diversified / Multi-Product)**	The person trades across multiple coin types or products. This is consistent with a genuine, active market participant rather than someone with a single-purpose agenda.
Trade Type	**AMBER (USDT only, sell-heavy)**	A focus exclusively on selling USDT warrants inquiry into the source of that USDT. If the person is consistently acquiring USDT from others and converting it to INR, investigate their counterparties and the origin of those coins.
Verified Status	**GREEN (All three: Email + SMS + KYC)**	A fully verified account provides stronger identity assurance on the platform itself. Treat as a positive supporting signal alongside Blynk's own KYC.
Verified Status	**RED (KYC not completed on platform)**	A person who has not completed KYC on the trading platform itself is a risk flag. Apply Tier 5 KYC and seek Management review.

14.2 Mandatory RM Questions — Counterparty Investigation

To protect Blynk Virtual from Scenario 2 fraud, the RM must always ask the following of any client who is also a USDT seller on P2P:

Q1	Sir, may I know whom you are usually selling your USDT to? Are they registered P2P merchants or general P2P IDs?
Q2	What rates are they offering you for your USDT? Are the rates above market rate?
Q3	How did you find the buyers you are selling to? Are they regular counterparties?
Q4	What is the source of the USDT you are selling? Did you purchase it yourself, or receive it from someone else?

Q5	Can you show your trade history on screenshare, including your most recent sell-side transactions?

OPPORTUNITY: Asking clients who they sell to is also a conversion opportunity — if their current buyers offer poor rates, Blynk can offer better rates and bring that USDT volume in-house.

14.3 Seller USDT Source & Payment Rules

Source of USDT — Mandatory Verification

When Blynk Virtual is BUYING USDT from a seller on P2P, the seller's USDT must have a clean, clear, and legitimate source:

- Seller must demonstrate a legitimate source of USDT — purchased from a verified exchange using their own verified bank account.
- If USDT was received from another person (gifted, transferred, or traded), a complete trail must be provided.
- If the source of USDT cannot be clearly established, the purchase must be REJECTED.
- Seller's Binance trading history must be reviewed using the profile assessment framework in Section 14.1.
- Seller must not have suspicious sell patterns — e.g. selling to many unknown or unverified P2P IDs at above-market rates.

ABSOLUTE RULE: Payment for any USDT purchase from a seller must ONLY go into the bank account held in the seller's own name. Payment into any third-party bank account — regardless of the reason — is STRICTLY PROHIBITED and must be rejected immediately.

Reasons this rule is non-negotiable:

- Third-party payments break the audit trail — Blynk cannot confirm where the money is going.
- A payment to a different name is a direct AML violation and exposes Blynk to PMLA liability.
- This is a classic technique used by fraud rings — the USDT seller is a front and the real beneficiary is concealed.
- RBI and PMLA regulations prohibit payments to unverified third-party accounts in crypto transactions.

14.4 Profile Assessment Quick Checklist — RM Tool

Run through this checklist before approving any trade. Record outcomes in the KYC report (Section 11.6).

#	CHECK ITEM	RESULT
1	Account age 90+ days (under 90 days = automatic High Risk flag)	[ ] Pass [ ] Flag
2	KYC verified	[ ] Pass [ ] Flag
3	Total trades 10 or more (under 10 = mandatory EDD)	[ ] Pass [ ] Flag
4	BUY/SELL ratio is balanced — no extreme sell-only or buy-only bias	[ ] Pass [ ] Flag
5	30-day trade count within normal range (3-15 investor, 10-15 trader, 30+ = flag)	[ ] Pass [ ] Flag
6	30-day completion rate 90%+ (below 75% = escalate to management)	[ ] Pass [ ] Flag
7	Avg. release time is 0.00 or low — no recent suspicious sell-side activity	[ ] Pass [ ] Flag
8	Positive feedback 95%+ — check ALL reviews for any scam or fraud mentions	[ ] Pass [ ] Flag
9	No 'scam', 'fraud', 'lien', or 'fake' keywords in any feedback — if found, MARK	[ ] Pass [ ] Flag

10	Counterparty count is broad (not just a few repetitive parties)	[ ] Pass [ ] Flag
11	Client asked: who they sell USDT to and at what rates	[ ] Pass [ ] Flag
12	Source of USDT is verified (own purchase from exchange — not received from unknown)	[ ] Pass [ ] Flag
13	If seller: payment goes to SELLER'S OWN bank account ONLY — no third-party payments	[ ] Pass [ ] Flag
14	Profile assessment recorded in KYC WhatsApp group and Google Drive	[ ] Pass [ ] Flag
