Job Description: Operations Head

Supersedes the designation 'Chief Operations Officer'

Designation	Operations Head
Formerly	Chief Operations Officer (title superseded; scope revised)
Department	Operations
Reporting To	General Manager – sole reporting line
Direct Reports	3 Operations Managers, one per shift, each with 2 Operations Executives
Working Hours	8.5 hours, with presence across all three shift timings as operational needs require
Location	Blynk Virtual Technologies Pvt. Ltd., 1st Floor Balwant Arcade, MP Nagar Zone-2, Bhopal

Position of the role. The Operations Head owns execution: what the desk trades, how fast, at what margin, and with what error rate, across all three shifts. **The role does not own KYC clearance and does not own payment release.** KYC and compliance decisions sit with the Compliance Head; payment release sits with Payment Operations. That separation is deliberate. The Operations Head carries the volume and margin target, and for that reason cannot also control the gate that stops a transaction or the hand that releases the money.

Objective

The Operations Head is accountable for the operational output of the business every day: orders executed correctly and within service level, assets managed accurately, targets met, and errors caught and corrected at their cause rather than repeatedly absorbed. The role runs a continuous three-shift operation through three Operations Managers and their Operations Executives.

The role is also expected to build. Rosters, KPIs, targets, MIS and standard operating procedures are designed by this role, not merely administered by it.

Key Responsibilities

1. Operations Management and Execution

- Own daily trading and order execution across purchase and sale flows on all three shifts.
- Ensure continuity of coverage and disciplined shift handover between Operations Managers.
- Maintain and enforce operational standard operating procedures, and update them within 48 hours of any process change.
- Investigate every operational error to root cause and close it with a documented corrective action. A recurrence of a closed issue is a reportable failure.
- Own the operational risk register: known failure modes, the control for each, and the person who owns that control.
- Ensure no Operations Associate or Operations Executive handles live volume without current certification.

2. Asset Management

- Own the lifecycle of trading assets across platforms and wallets: position, movement, internal transfers and reconciliation to the Company's records.
- Ensure asset movements are recorded at the time they occur and reconcile daily against platform and wallet balances.
- Monitor exposure and position limits, and report any breach to the General Manager the same day.
- Coordinate with Finance on valuation, inventory method and period-end position, without assuming ownership of the accounting treatment.

3. Target Planning

- Build the monthly and quarterly volume and margin plan, and defend the assumptions behind it to the General Manager.
- Cascade targets to each shift and Operations Manager with a stated basis, so that a target is understood rather than only received.
- Track achievement daily and report shortfall with the cause and the corrective action, not only the number.
- Design and propose strategies to improve execution efficiency and margin, for the General Manager's approval.

4. KPI Planning and Scorecard Ownership

- Design the operations KPI framework: what is measured at Operations Manager, Operations Executive and Operations Associate level, how it is weighted, and what constitutes each performance grade.
- Set and review targets each quarter so that the scorecard reflects current volumes, staffing and process, rather than last year's assumptions.
- Ensure every KPI is measurable from a system record, not from self-reporting.
- Ensure no operational KPI rewards throughput at the expense of accuracy, and that error and loss measures act as gates on the grade.
- Supply verified KPI data to HR for the appraisal and incentive cycle within the stated timeline.

5. Shift Planning and Capacity

- Design the monthly roster across the morning, evening and night shifts, with a defined minimum viable strength for each shift and function.
- Plan for leave, absence, attrition and peak volume so that coverage does not depend on individuals working beyond their shift.
- Ensure the roster provides for shift handover as part of the shift, and that no shift is left without a Operations Executive on duty.
- Rotate shifts equitably and publish the roster with sufficient notice for employees to plan around it.
- Raise capacity gaps with HR and the General Manager in advance of the shortfall, not after it.

6. Strategy Building and Process Improvement

- Evaluate the operating model continuously: platform mix, counterparty mix, process design, tooling and automation opportunities.
- Propose changes with a stated expected benefit, the risk introduced, and how the risk will be controlled.
- Work with Technology on ERP requirements arising from operations, and own user acceptance testing for any release affecting the desk.
- Reduce manual steps where automation removes an error source, and document any process before automating it.

7. Retention Management

- Own voluntary attrition within the operations function, by shift, and report the drivers rather than only the rate.
- Identify flight risk among Operations Managers, Operations Executives and experienced Operations Associates, and act before the resignation rather than after it.
- Ensure the night shift is not treated as a posting of last resort: rotation, recognition and progression must apply equally across shifts.
- Build the supervisory bench so that no shift depends on a single individual, and maintain a named successor for every Operations Manager and Operations Executive position.
- Work with HR on onboarding quality, certification and career progression within the operations track.

8. Customer Experience Reporting

- Report on the operational drivers of client experience: execution time, order completion rate, failure and cancellation rate, dispute and appeal volume, and repeat-issue clients.
- Identify where a client experience problem originates in an operational cause, and fix the cause rather than escalating the symptom to the Client Relations function.
- Share the operational view with the Customer Relationship Head on a fixed cadence, so that the client-facing and desk-facing pictures reconcile.
- Do not use client experience reporting to reopen a compliance decision. Where a client's experience was affected by a compliance hold, the report records the fact and stops there.

9. MIS Preparation and Reporting

- Prepare and own the operations MIS: volume, margin, execution service level, error and loss, shift performance, staffing and utilisation.
- Deliver the daily, weekly and monthly reporting pack to the General Manager on a fixed schedule, in a fixed format, whether or not the numbers are good.
- Ensure MIS is drawn from system data and reconciles to Finance's records. A management report that does not tie to the books is not a management report.
- Maintain the definitions behind every metric so that the same measure means the same thing in every period.

10. Platform Appeals and Dispute Handling

- Own all appeals and disputes raised on trading platforms, from filing through to outcome.
- Ensure each appeal is filed with the complete evidence set within the platform's stated window.
- Track appeal outcomes and identify the operational practice behind any recurring loss.
- Coordinate with Compliance and Finance on the evidence required, and escalate any platform account restriction or penalty to the General Manager on the day it is applied.

11. Crisis Management and Escalation

- Lead the operational response to high-volume delays, platform or system outage, settlement failure and fraud-related escalations.
- Maintain and test the emergency action protocol, including who has authority when the General Manager is unreachable.
- Report every incident with a written account within 24 hours: what happened, what it cost, what stopped it, and what changes.

- Escalate immediately any suspected internal fraud, to the General Manager and the Compliance Head simultaneously, without prior notice to anyone in the operational reporting line.

Authority and Limits

- **Approves:** shift rosters and work allocation; standard operating procedure amendments within an existing process; operational write-offs up to ____; suspension of an Operations Associate or Operations Executive from the live desk pending investigation.
- **Requires General Manager approval:** headcount changes; rate or pricing policy; onboarding of a new platform or counterparty; any process change affecting a compliance or payment control; any disciplinary action beyond a first written warning.
- **Holds no authority over:** KYC clearance, customer risk categorisation, compliance referrals, or payment release. The Operations Head may not instruct a KYC Associate, an Internal Compliance Officer, a Payment Operations Associate or a Payment Operations Executive to clear, expedite, waive or release. Where speed is needed, the request goes to the Compliance Head or the Head of Liquidity & Settlements.
- **Escalate to the General Manager:** any loss above ____; any platform restriction or penalty; any exposure or position limit breach; any incident affecting settlement.

Performance Standards

Measure	Standard
Volume and margin against plan	____% of target
Execution within service level	Above ____%
Operational error rate per 1,000 transactions	Below ____
Operational losses and write-offs as a share of volume	Below ____%
Appeal and dispute outcomes in the Company's favour	Above ____%
Shift coverage against minimum viable strength	100% of shifts
Voluntary attrition within operations	Below ____%
MIS delivered on schedule and reconciled to Finance	100%
Repeat incidents from a closed corrective action	Zero
Instances of directing a compliance or payment function	Zero

Error rate and operational loss act as gates. A quarter with a material loss or a repeat incident caps the grade regardless of volume achievement. Targets marked ____ are set in the departmental KPI scorecard.

Eligibility and Skills

Essential

- Bachelor's degree; a Master's degree in management or a related field is an advantage.
- Seven years or more in operations, including at least three years leading a multi-layer team through subordinate managers.
- Proven ownership of a transaction-processing or trading operation with hard service levels and measurable error and loss exposure.

- Demonstrated experience running a continuous shift-based operation, including night coverage.
- Ability to design a KPI framework and an MIS pack, not only to report against one supplied to them.
- Strong command of Excel and comfort working directly inside an ERP or operations dashboard.
- Clear written and spoken English and Hindi.

Preferred

- P2P, exchange, payment gateway, broking or NBFC operations background.
- Experience with trading platform dispute and appeal processes.
- Exposure to AML and KYC controls from an operational standpoint, sufficient to respect them without owning them.
- Experience introducing automation into a manual operational process.

Attributes

- Sound judgement under pressure, including at 3 a.m. on a shift they are not physically present for.
- Builds structure rather than relying on personal availability to hold the operation together.
- Accepts a compliance or payment refusal without relitigating it through the people who issued it.
- Reports a bad number on schedule rather than late with an explanation.
- High personal integrity and complete ownership of outcomes.

Notes for HR and Management

KYC oversight has been removed from this role, deliberately. The superseded description gave the Chief Operations Officer supervision of customer onboarding and KYC verification while also holding the sales target. That places the volume target and the gate that blocks volume in the same pair of hands, and it is the first structural weakness an AML inspection looks for. KYC and compliance now sit under the Compliance Head, and the Authority section records that the Operations Head cannot direct those functions. If this is restored, every compliance control written into the Internal Compliance Officer and KYC Associate descriptions loses its effect.

The Relationship Manager no longer reports to this role. The superseded description listed the Relationship Manager among the direct reports. Relationship Managers sit under the Customer Relationship Head. Direct reports are the three Operations Managers, one per shift.

The reporting line names a role, not a person. The superseded description named the individual General Manager. A description outlives the person holding the post above it, and naming an individual in it creates an amendment every time either seat changes.

This Job Description defines the scope of the role and does not constitute the whole of the terms of employment. It is to be read with the appointment letter, the Attendance Policy, the Code of Conduct and the AML and KYC Policy of the Company. The Company reserves the right to revise this description with notice to the employee.

Acknowledgement

I have read and understood this Job Description and accept the responsibilities, escalation obligations and authority limits set out in it, including the limits on directing the compliance and payment functions.
