Job Description: Head of Liquidity & Settlements

Supersedes the designation 'Manager, Payment Operations' · Function head

Designation	Head of Liquidity & Settlements
Formerly	Manager – Payment Operations (title superseded; scope extended to liquidity)
Department	Liquidity and Settlements
Reporting To	General Manager – sole reporting line
Direct Reports	Settlement Operations Manager, and through that role the Payment Operations Executives (one per shift) and Payment Operations Associates
Grade Level	Senior management, function head
Working Hours	8.5 hours, with availability across all three shift timings
Location	Blynk Virtual Technologies Pvt. Ltd., 1st Floor Balwant Arcade, MP Nagar Zone-2, Bhopal

Position of the role. The Head of Liquidity & Settlements owns the money side of the business: the fiat liquidity that funds the desk and the settlement of every rupee that comes in or goes out. The function reports to the General Manager and not to Operations or Finance, deliberately: **the function that verifies funding must not sit under the function that releases assets, and the function that pays must not sit under the function that reconciles.** Liquidity here means money only. Digital asset inventory and its movement remain with Operations, so the function that moves money never also moves the asset.

Role Purpose

The Head of Liquidity & Settlements is accountable for having the right money in the right account at the right time, and for the accuracy, timeliness and integrity of every inward verification and outward payment across all shifts. The role owns the payment controls, the banking channel capacity and the evidence that every settlement was correct, and leads the function through the Settlement Operations Manager.

Key Accountabilities

1. Payment Control Ownership

- Own and enforce maker-checker across every outward payment: prepared by one person, released by another, both names recorded against the transaction.
- Ensure no Associate verifies an inward receipt for an order on which they executed the outward leg.
- Set and review the release threshold above which the Payment Operations Executive must be the checker, against loss and error experience rather than convenience.
- Ensure the function verifies beneficiary details against the platform record through the ERP and against the client's KYC record, and never solely against details passed on by another function.
- Ensure inward receipt is confirmed against the bank record only, never against a screenshot, a reference supplied by a counterparty, or a forwarded message.

2. Payment Execution Across Shifts

- Ensure payouts and confirmations are completed within the service level on every shift, including the night shift.
- Confirm that payout instructions on client sales state the net amount after tax deduction at source, and that no Associate computes or adjusts a deduction.
- Monitor pending, failed and duplicate payments and ensure each is resolved and recorded the same shift.
- Ensure funding confirmations reach Operations through the recorded channel, so that no order is released on a verbal confirmation.

3. Liquidity Management

- Own intraday fiat liquidity across every Company bank account and channel: the balance available to fund buy-side orders, the capacity to make sell-side payouts, and the headroom within each channel's limits.
- Forecast the desk's funding need by shift and position balances ahead of it, so that a buy-side advertisement is never constrained by an unfunded account and a payout never waits for funds.
- Move funds between Company accounts only on a recorded instruction, prepared by one person and released by another, and never to an account outside the approved list.
- Fund the rupee leg of inventory purchases placed by Operations on the Company's own exchange account. The trade decision and the digital asset leg remain with Operations.
- Work within the liquidity allocation and limits set by the Finance Manager and the Chief Financial Officer. Where the desk needs more than its allocation, the request goes to Finance; it is not met by drawing on balances committed elsewhere.
- Report the liquidity position at each shift close to the General Manager and the Finance Manager: balances by account, capacity by channel, and any shortfall expected in the next shift.

4. Banking Channels and Capacity

- Manage the approved payment channels: availability, cut-off timings, per-transaction and daily limits, and channel-level failure behaviour.
- Plan channel and limit capacity against expected volume with the Finance Manager, and escalate a shortfall before it constrains the desk.
- Maintain the contingency position: which approved alternate channel is used when a primary fails, and who authorises the switch.
- Ensure no Company payment is ever routed through a personal account or an unapproved channel, and treat any instance as a conduct matter.

5. Reconciliation Interface

- Ensure the function closes each day's payment position and hands a complete record to Finance.
- Resolve differences raised by the Accounts team on payment records within the stated timeline.
- **Do not perform the accounting reconciliation.** Reconciliation sits with Finance so that it remains independent of the function that moved the money.

6. Error and Fraud Prevention

- Investigate every payment error to root cause and close it with a documented corrective action.
- Track error and loss by shift, by Associate and by cause, and act on a trend before it becomes a loss.
- Escalate immediately to the General Manager and the Compliance Head any suspected internal fraud, without prior notice to anyone in the function's reporting line.

- Ensure any request to change a beneficiary, split a payment, or pay to a third party is escalated rather than actioned, at every level of the function.

7. Function Leadership and Reporting

- Lead the Settlement Operations Manager and, through that role, the Payment Operations Executives and Associates. Plan rostering with HR so every shift carries maker and checker capacity.
- Set the KPI framework for the function, ensuring accuracy gates the grade and no measure rewards speed of release.
- Own certification: no Associate handles live payments without it.
- Deliver the payment MIS to the General Manager on a fixed schedule: volume, value, service level, error and loss, channel availability, limit utilisation and the liquidity position by account.
- Own retention and succession, and maintain a named successor for the Settlement Operations Manager and each Payment Operations Executive position.

Authority and Limits

- **Approves:** payout release above the Associate, Executive and Settlement Operations Manager thresholds; movement of funds between Company accounts within the allocation set by Finance; channel switching; rosters and work allocation; corrective actions within the function.
- **Requires General Manager approval:** a new banking channel or payment partner; a change to the release threshold structure; headcount; any write-off of a payment loss above ____.
- **Requires Finance Manager or Chief Financial Officer approval:** any change to the liquidity allocation committed to the desk; use of any account not on the approved list; any movement of funds outside the Company's own accounts other than a payment against an approved instruction.
- **Holds no authority** to release an order, to move digital assets, to clear KYC, to post an accounting entry, or to direct Operations or Compliance.
- **Escalates to the General Manager:** any loss above ____; any suspected internal fraud, simultaneously to the Compliance Head; any channel failure affecting settlement; any instruction from any person to bypass maker-checker.

Key Performance Indicators

Measure	Standard
Payment accuracy: beneficiary, amount, reference	100%
Duplicate or wrong-beneficiary payments	Zero
Maker-checker compliance across the function	100%
Inward receipts verified against bank record only	100%
Payouts within service level, all shifts	Above ____ %
Payment losses as a share of value processed	Below ____ %
Daily payment position closed and handed to Finance	100% of working days
Payments routed through unapproved channels	Zero
Buy-side capacity constrained by an unfunded account	Below ____ occurrences per month
Payouts delayed for lack of funds	Zero
Inter-account fund movements with maker and checker	100%

Payment accuracy and maker-checker compliance act as gates. Either failing caps the grade for the period regardless of volume or service level. No measure rewards speed of release.

Qualifications and Experience

Essential

- Bachelor's degree; a commerce, finance or management qualification preferred.
- Six years or more in payment operations, banking operations or settlements, including at least three leading a team.
- Demonstrated ownership of a maker-checker payment control environment.
- Working command of UPI, IMPS, NEFT and RTGS, including cut-offs, limits and failure behaviour.
- Experience running a continuous shift-based function.
- Clear background verification.

Preferred

- Payment gateway, exchange, NBFC or bank settlements background.
- Experience managing banking relationships on limits and channel capacity.
- Exposure to AML red flags in payment flows.

Competencies

- Will hold a control when a waiting counterparty and an impatient colleague both want it waived.
- Investigates to cause rather than to blame.
- Builds a function that runs correctly on the night shift without the Manager present.
- High personal integrity. This role has the broadest access to Company funds of any position below the Board.

Notes for HR and Management

Liquidity means money only. Digital asset inventory, its sourcing and its movement between platforms and wallets remain with Operations. Where Operations buys inventory on the Company's own exchange account, this function funds the rupee leg and Operations executes the asset leg. The function that moves money never also moves the asset: the same separation as verification and release, applied to the Company's own positions.

Treasury stays with Finance. The Finance Manager and the Chief Financial Officer decide how much liquidity is committed to the desk and hold the statutory funding priorities. This role positions that money across accounts and channels day to day, within the allocation it is given.

This Job Description defines the scope of the role and does not constitute the whole of the terms of employment. It is to be read with the appointment letter, the Attendance Policy, the Code of Conduct and the AML and KYC Policy of the Company. The Company reserves the right to revise this description with notice to the employee.

Acknowledgement

I have read and understood this Job Description and accept the accountabilities and control obligations set out in it, including the maker-checker discipline and the limits on reconciliation.
