Job Description: Finance Manager

Finance function · Strategic finance, taxation and treasury

Designation	Finance Manager
Department	Finance
Reporting To	Chief Financial Officer – sole reporting line
Direct Reports	Banking Officer, and the finance team (___ positions)
Grade Level	Senior management
Working Hours	8.5 hours, general shift
Location	Blynk Virtual Technologies Pvt. Ltd., 1st Floor Balwant Arcade, MP Nagar Zone-2, Bhopal

Position of the role. The Finance Manager runs strategic finance under the Chief Financial Officer: financial modelling, budgeting and forecasting, tax preparation and research, valuation workings, treasury planning and management reporting. The books, the close and reconciliation sit with the Accounts Manager, who reports alongside this role to the Chief Financial Officer. **The role does not execute payments and does not hold payment credentials.** Tax positions, accounting policy and external valuations are prepared here and approved by the Chief Financial Officer.

Role Purpose

The Finance Manager is responsible for the planning and analysis that turns the Company's books into decisions: the financial model, the budget and forecast, the tax position and its supporting file, valuation workings, cash and liquidity planning, and the management reporting pack. The role works from the books maintained by the Accounts function and is accountable for the accuracy of every number it presents.

The role is expected to build. The financial model, the budgeting process, the tax position file and the management reporting framework are designed by this role and approved by the Chief Financial Officer.

Scope and Scale

Dimension	Scale
Entities	All group entities, with entity-wise books and inter-entity transactions
Team	Finance team (___ positions)
Business	Virtual digital asset and P2P services, with continuous three-shift operations
External	Chartered Accountant, statutory and tax auditors, tax counsel and bankers

Key Accountabilities

1. Financial Strategy, Planning and Modelling

- Build and maintain the Company's financial model: revenue and margin by line, cost base, working capital, cash conversion and unit economics.

- Own the annual budget and the rolling forecast, agree them with the Chief Financial Officer, and track actuals against them with variance explained by cause rather than by category.
- Model scenarios for pricing, volume, capital deployment, new lines of business and platform mix, and present the downside case as clearly as the base case.
- Advise the Chief Financial Officer on the financial implications of any proposed change before it is committed.

2. Taxation and Tax Structuring

- Prepare and maintain the group's tax position across income tax, tax deducted at source, and goods and services tax, including the treatment applied to virtual digital asset transactions, for approval by the Chief Financial Officer.
- Research and propose the structuring of the group's entities and transactions for tax efficiency, for the Chief Financial Officer's approval, and keep the reasoning documented in a form that can be produced under assessment.
- **Ensure every structure has genuine commercial substance and documented support.** Where a position is not settled in law, obtain written professional advice before it is adopted, and record the advice with the position. A position that cannot be explained on paper is not adopted.
- Ensure the group's inter-entity arrangements are supported by agreements, pricing rationale and actual performance, not only by book entries.
- Own the accuracy and timeliness of every tax deposit and return, working from the books and reconciliations maintained by the Accounts Manager, including deduction on virtual digital asset transfers under Section 393 of the Income-tax Act, 2025 (formerly Section 194S of the Income-tax Act, 1961).

3. Valuation

- Prepare valuation workings for the Company's digital asset inventory on the method approved by the Chief Financial Officer, and test its consistent application with the Accounts Manager.
- Prepare and maintain business valuation work required for fundraising, restructuring, statutory purposes or Board decision-making, and identify where an independent valuer is required rather than an internal estimate.
- Review the depreciation policy and impairment assessment with the Accounts Manager, who maintains the fixed asset register.
- Ensure any valuation presented externally states its basis, its date and its limitations, and is approved by the Chief Financial Officer before release.

4. Interface with the Accounts Function

- Use the books, close and reconciliations maintained by the Accounts Manager as the basis of all reporting, tax computation and valuation work.
- Raise any difference between management figures and the books with the Accounts Manager, and resolve it before the figure is reported.
- **Hold no responsibility for posting entries or performing reconciliations.** Those sit with the Accounts function, so that the analysis and the record are held by different people.

5. Treasury and Cash Flow

- Own cash flow forecasting and liquidity planning across entities and bank accounts, and set the liquidity allocation committed to the desk. Day-to-day positioning of that allocation is held by the Head of Liquidity & Settlements.

- Plan banking channel and limit capacity with the Head of Liquidity & Settlements, so that funding does not constrain the desk and idle balances are not left unmanaged.
- Oversee the Banking Officer's management of banking relationships, facilities, charges and limits, and report any change in the Company's banking standing to the Chief Financial Officer.
- Ensure funds are available to meet statutory obligations on their due dates before they are committed elsewhere.

6. Audit, Chartered Accountant and Advisor Coordination

- Support the Chief Financial Officer's relationship with the Chartered Accountant, statutory and tax auditors, and tax counsel, and coordinate them on tax matters.
- Contribute the tax, valuation and treasury schedules to the audit file prepared by the Accounts Manager, ahead of the audit rather than during it, and resolve queries on those areas within the auditor's timeline.
- Escalate to the Chief Financial Officer any proposed audit qualification, adverse observation or disagreement on treatment, at the point it arises rather than at signing.
- Instruct external advisors with a complete factual brief, and record the advice received against the position it supports.
- Close every internal control observation on evidence, with a dated corrective action.

7. Tax Research and Position Maintenance

- Maintain current knowledge of the tax and regulatory framework affecting the business, including virtual digital asset taxation, goods and services tax treatment of intermediation, and the transition from the Income-tax Act, 1961 to the Income-tax Act, 2025.
- Map superseded statutory references to their current equivalents across the Company's templates, letters, contracts, systems and policies, so that no document cites a repealed provision.
- Assess the effect of any amendment, circular, ruling or judicial decision on the Company's adopted positions, and report the effect to the Chief Financial Officer with a recommendation.
- Maintain a written record of each material tax position: what it is, why it was adopted, what supports it, and what would change it.

8. Team Leadership

- Lead the finance team: allocation, quality, development and succession.
- Ensure the segregation between recording, reconciling and paying is maintained within the team at all times, including when the team is short-staffed.
- Set the KPI framework for the function, with filing timeliness and accuracy acting as gates rather than as targets.
- Develop the finance team toward analysis rather than only reporting, and maintain a named successor for this role.

9. Reporting

- Deliver the financial reporting pack to the Chief Financial Officer on a fixed schedule and in a fixed format: profit and loss against budget, balance sheet, cash flow, entity-wise position, tax status and key ratios.
- Ensure every management report reconciles to the books. A report that does not tie to the books is not a management report.
- Report a bad number on schedule rather than late with an explanation, and mark provisional figures as provisional.

Key Interfaces

Function	Purpose of the interface
Chief Financial Officer	Reporting line: budget, tax positions, valuation, approvals, escalation
Accounts Manager	Books, close, reconciliations, statutory working papers and the audit file
Head of Liquidity & Settlements	Daily payment position, channel and limit capacity
Compliance Head and External Compliance Officer	Accounts under lien or external query; regulatory financial data
Operations Head	Asset position, inventory valuation and margin reconciliation
HR Manager	Payroll funding, statutory deposits and headcount cost
Chartered Accountant and auditors	Filings, audit, assessments and professional advice

Authority and Limits

- **Approves:** the financial model and its assumptions for presentation; reporting formats; work allocation within the finance team; working papers supporting a tax position, before submission for approval.
- **Requires Chief Financial Officer approval:** the budget and forecast; any tax position or structuring proposal; any valuation presented externally; any change in accounting policy or valuation method; engagement of an external advisor; any change to a banking facility.
- **Requires Board approval, through the Chief Financial Officer:** any tax position that remains unsettled after advice; any restructuring of entities or inter-entity arrangements.
- **Holds no authority** to execute a payment, hold a payment credential, post an accounting entry, release an order, or direct the compliance function.
- **Escalates to the Chief Financial Officer immediately:** any proposed audit qualification; any notice, assessment or proceeding from a tax authority; any instruction to record a transaction other than as it occurred; any matter affecting the reported financials.

Key Performance Indicators

Measure	Standard
Statutory filings and deposits on or before due date	100%. Zero late fees or interest
Management reporting reconciled to the books	100%
Budget variance explained by cause within reporting cycle	100% of material variances
Audit observations, and repeat observations	___ or fewer; repeats zero
Material tax positions with documented support on file	100%
Segregation between recording, reconciling and paying	Maintained 100% of the time

Statutory timeliness and segregation act as gates. A late filing, or any period in which the segregation between recording, reconciling and paying was not maintained, caps the grade regardless of performance on every other measure. Targets marked ___ are set by the Board.

Qualifications and Experience

Essential

- Chartered Accountant, or CMA, or a Master's degree in finance with equivalent demonstrated capability.
- Six years or more in finance, including at least three leading a finance function or a substantial part of one.
- Practical command of Indian direct and indirect taxation: income tax, tax deducted at source, and goods and services tax, including return preparation, reconciliation and assessment handling.
- Demonstrated experience of tax structuring supported by documented reasoning, not only of compliance filing.
- Financial modelling capability: builds the model rather than maintaining someone else's.
- Multi-entity accounting experience with inter-entity transactions.
- Advanced Excel and working command of Tally; ERP data literacy.

Preferred

- Virtual digital asset, fintech, payments or exchange sector experience.
- Exposure to the special tax treatment of virtual digital assets and to inventory valuation on a defined cost-flow method.
- Experience handling a tax assessment, appeal or departmental proceeding.
- Valuation experience for fundraising or statutory purposes.
- Experience preparing an organisation for its first external audit.

Competencies

Core

- Integrity: will not record what cannot be supported, whoever is asking.
- Reports the number that is true, on schedule, including when it is unwelcome.
- Distinguishes a defensible position from a convenient one, and says which is which.

Functional

- Tax technical depth and the research discipline to keep it current.
- Financial modelling and scenario analysis.
- Valuation methodology and its limits.
- Internal financial control design.

Leadership

- Builds a finance team that analyses rather than only records.
- Holds segregation of duties when the team is short-handed.
- Instructs external advisors well: a complete brief, a specific question, a recorded answer.
- Presents to a Board clearly, including the parts that are uncertain.

Notes for HR and Management

The finance function is split under the Chief Financial Officer. This role holds strategic finance: modelling, budgeting, tax preparation and research, valuation workings, treasury and reporting. The Accounts Manager holds the books, the close and reconciliation. The two report alongside each other to the Chief Financial Officer. The split keeps the analysis and the record in different hands, so a management figure is always tested against books this role did not keep.

Tax structuring is written with a documentation condition attached, deliberately. The requirement that every structure carry genuine commercial substance and written professional advice where the position is unsettled is what separates structuring from exposure. In a virtual digital asset business, where several positions remain contested, the file supporting a position matters as much as the position itself, and it has to be built at the time rather than reconstructed during an assessment.

Segregation is written as a gate rather than a principle. Neither the Finance Manager nor the Accounts team executes payments or holds payment credentials, and the Accounts team alone holds recording and reconciliation. The pressure to relax this arrives when the finance team is short-staffed and a payment is urgent. Written as a gate, relaxing it costs the grade, which is the only form in which this control reliably survives.

This Job Description defines the scope of the role and does not constitute the whole of the terms of employment. It is to be read with the appointment letter, the Attendance Policy, the Code of Conduct and the policies of the Company in force from time to time. The Company reserves the right to revise this description with notice to the employee.

Acknowledgement

I have read and understood this Job Description and accept the accountabilities, escalation obligations and authority limits set out in it, including the limits on payment execution and the documentation conditions attaching to tax positions.
